Summary	I am an AI Engineer currently upskilling in AI Engineering at Masterschool Institute of Technology, with hands-on experience in Python, SQL, Generative AI and LLMs, prompt design, API integration, and AI models. I bring to the field of AI Software Engineering a rich background in Fine Arts, culture, history, poetry, photography, and analytical thinking—bridging humanistic insight with modern technology, and aspiring to work in Machine Learning and Deep Learning. I would like to train models and bridge in my practice the field of Software Development and Machine Learning.	
Technical Skills	Backend & Web Development (Python, OOP, Flask, REST APIs, HTML/CSS, HTTP, version control, deployment, unit testing, Git), Database (SQL, ORM (SQLAlchemy), relational database design, persistent data management), AI Engineering (Generative AI, prompt engineering, LLM evaluation, API integration, RAG, embeddings, AI agents)	
Soft Skills	Problem-solving, Teamwork, Communication, Translation	
Education	Masterschool AI Engineering	Aug 2025 - Oct 2026 Training Program
	- Gained hands-on experience in Python, Flask, and SQL for backend and API development. - Built Generative AI applications using prompt engineering, LLM evaluation, and API integration (OpenAI, Gemini, Claude). - Designed and deployed AI-driven projects, including an A/B Test Analyzer and Marketing Persona Generator. - Applied web development and version control fundamentals to deliver full AI solutions.	
	Academy of Fine Arts Leipzig Fine Arts	Oct 2009 - Oct 2015 Diploma
	University of Leipzig Philosophy, Comparative Literature, Biology	Oct 2005 - Jun 2007 Bachelor
Projects	Freie Universität Berlin Filmology, NewGreekPhilology	Oct 2019 - Jun 2021 Bachelor
	Wikiquiz Project Repository	Oct 2025
	- Collaborated in a hackathon team of AI students to design and develop a data-driven guessing game using Wikipedia content, where players inferred cities based on textual descriptions with the city name intentionally removed to create a blind-spot challenge. - Built a Python-based application with external API integration, handling data retrieval, preprocessing, and game logic to dynamically generate clues and ensure a scalable, interactive user experience.	
	Quality Prediction of Cosmetic Cream Production see title https://github.com/kathrinalbertinefreytag-commits/Cream-Production-Prediction.git Concerning the production of cosmetic cream there is a model trained to predict the quality cream making process due to values entered for parameters on an elementary webpage. There is the possibility to visualize the result on a heatmap and two links to chatbots - one for a websearch concerning questions about creammaking, the other one for a RAG search in documents the openAI was feeded with. ML, RAG, Flask, Web application	January 26 - March 26

Experience	Self-Employed Artist	Aug 2015 - Aug 2025 Leipzig, Athen, Berlin
	- Translated Greek poetry into German, applying semantic analysis and linguistic precision to improve accessibility for dozens of poetry enthusiasts. - Independently developed and realized artistic projects, organized exhibitions, professional presentation and documentation of artworks, self-managed scheduling and continuous development of artistic practice. - Authored a novel (in progress for publication), demonstrating structured problem-solving, long-form reasoning, and sustained focus across an extended development cycle.	
	Diatton Edition Typesetter	Oct 2015 - Oct 2016 Athen
	- Led the typesetting and layout production for an independent art publishing project, contributing to the successful release of 45 printed books combining poetry and urban photography, reaching hundreds of art enthusiasts. - Resolved stakeholder and contributor issues efficiently by coordinating revisions, managing feedback, and ensuring timely delivery under production deadlines. - Collaborated with artists, poets, photographers, and editors, aligning creative vision with technical and production constraints through clear, structured communication.
